Governor of Missouri
Program Description

The Governor’s Award for Quality and Productivity (GAQP) is a team award recognizing service excellence, efficiency/process improvement, and innovation, in Missouri State Government. Teams employed by the State of Missouri, who successfully complete a project with another section, division, department, agency, or community organization are eligible to submit a nomination.

Nominations must provide documentation which may include, but is not limited to, background information, procedures, and measurable impact of the project nominated. All winning projects must meet established requirements of effectiveness, responsiveness, and efficiency of such quality that would make the project a model of excellence in state government nationally.

The GAQP through the Years

The GAQP was originally established in 1988. At that time, nominations could be submitted for a project that was completed and received department/agency approval. The nominations were reviewed by a Selection Committee based on a set of criteria. Award winners were identified, and sometimes multiple winners were awarded in one criteria area. Improvements continued to be made to the GAQP over the years. In 2001, the use of specific award categories was introduced.

The most recent enhancement to the GAQP program was the implementation of the Pinnacle Award in 2010. The Pinnacle Award is not available for nomination. It is only used (recommended) by the Selection Committee if, in their opinion, the nomination clearly encompasses multiple award categories in a manner that exemplifies the spirit of the Governor’s Award, or exceeds all other nominations.

Today the GAQP may recognize winning teams in three categories: Customer Service, Efficiency/ Process Improvement, and Innovation, to serve as a model of efficiency, quality, and effectiveness for other work teams to follow in Missouri State Government.

19 nominations were received for consideration representing nine state agencies. Today we recognize and congratulate each winning team.
Program Description

The Governor’s Award for Quality and Productivity (GAQP) is a team award recognizing service excellence, efficiency/process improvement, and innovation in Missouri State Government. Teams employed by the State of Missouri, who successfully complete a project with another section, division, department, agency, or community organization are eligible to submit a nomination.

Nominations must provide documentation which may include, but is not limited to, background information, procedures, and measurable impact of the project nominated. All winning projects must meet established requirements of effectiveness, responsiveness, and efficiency of such quality that would make the project a model of excellence in state government nationally.

The Challenge: Every winter unemployment claims increase to account for seasonal layoffs predominately in the construction and tourism industries. It is not uncommon for nearly 25% of an entire year’s initial Unemployment Insurance (UI) claims workload to occur during the winter months of December and January. This annual increase in claims regularly outstripped the capacity of full-time staff serving in the Unemployment Insurance Benefits Section resulting in more unanswered calls, increased average phone wait times, increased claims inquiry calls to the agency helplines, and increased time in resolving claims issues that may directly impact the claimants’ timely access and receipt of benefits.

The goal of the project was to significantly improve responsiveness and customer service in processing UI claims. Primary target improvements were lower average wait times for customers, an increase in the number of calls answered, and a reduction in deflected calls effectively resulting in the timely processing of UI claims, quicker resolution of claims issues and ultimately greater customer satisfaction.

Project Implemented: The Employment Security Division leadership created a vision to handle the spike in initial UI claims. Management executed an agency-wide workforce development initiative and assembled a cross-divisional team for intensive initial claims intake cross-training.

Employees from every section of the Division of Employment Security received classroom simulation-based training and were then paired with experienced claims staff to both observe and put their training to use in a controlled setting. Over 100 staff members rose to the call, spending a portion of each week away from their regularly assigned duties to staff the front lines of the agency’s claims center during the winter months.

This assistance not only assured a higher number of answered calls, but it enabled the more experienced fulltime Unemployment Insurance benefits staff to focus efforts on working more complex cases and issuing eligibility determinations in a more timely fashion.

Results: The initiative has had a measurable positive impact on the quality of services the agency provides its customers, which has resulted in the development of a stronger agency workforce with a greater understanding of the Division’s mission and values. Comparing a five-week period ending the week of January 20, 2018, to the same period one year earlier, calls answered increased by 29%, average wait time decreased by 41%, and the total number of unanswered calls decreased by 72%.

This project has produced a sustainable model for quick deployment of resources to meet spikes in workload. Cross-trained staff are regularly engaged in claims intake to maintain skills for future use and to eliminate the need for retraining. Due to the success attained, plans include an expansion of cross-training to include other areas of the Division that experience seasonal fluctuations. Balancing the workload in these units will increase the quality and service for Missouri’s workforce and businesses while creating growth opportunities for Division staff through expanded knowledge and experience.

Promoting the economic stability, employment, and fairness for Missouri businesses and workers while maintaining the integrity of the Unemployment Insurance program is the core mission of the Division of Employment Security and the Department of Labor and Industrial Relations. The Unemployment Insurance cross-training initiative is an exceptional example of the State of Missouri employees’ commitment and dedication to public service and continuous improvement.

For more information about this project and team, please contact Chris Slinkard:
Chris.Slinkard@Labor.Mo.Gov or (573) 751-2070
The Challenge: The St. Louis Psychiatric Rehabilitation Center (SLPRC) has been continually challenged with high turnover among its nursing ranks, regardless of skill mix, with unacceptable turnover in Psychiatric Technicians (PTs), Licensed Practical Nurses (LPNs), and Registered Nurses (RNs). In the course of two years, the entire population of PTs would be replaced more than twice over, with less than a fifth of the professional nurses remaining to provide the supervisory oversight and direction needed by a group of paraprofessionals that comprised 37% of the entire SLPRC workforce. This turnover of staff led to difficulties in continuity of care, staff and client safety concerns, and large supplemental overtime requests.

The Goal: Reduce the average number of PT, LPN, and RN vacancies, and reduce the annual turnover percentages of these classifications. For RN’s alone, the goal was a 20% reduction in the turnover with a cost avoidance of $112,872.

Project Implemented:
- Adopting a private sector schedule for RNs and LPNs
  - Conversion of RN/LPN shifts from 8 hours to 12 hours
  - Provision of the option for 0.9 FTE employment
  - Development of a Preceptor program
  - Conversion of vacant LPN positions to RNs
- Use of Robust Process Improvement to reduce costs, errors, and inefficient processes
- Commitment to Trauma Informed Care, recognizing pervasive chronic stress and trauma exposure in behavioral health settings
  - Adoption of an Assaulted Staff Action Program
  - Utilization of Alive and Well training provided by the St. Louis Regional Health Commission to mitigate the toxic health effects of chronic stress
  - Utilization of training adopted from the Racial Equity Learning Exchange
- Commitment to the enhancement of staff satisfaction for Direct Care Staff through the
  - Use of listening sessions
  - Movement away from a punishment/investigation model for staff discipline toward a system improvement model. This includes a commitment to
    - Career progression opportunities for PTs
    - Peer mentorship program for PTs
    - Commitment to hiring in anticipation of attrition

Results:
- Highlights of these efforts for FY18 were:
  - For Psychiatric Technicians
    - 60.1% decrease in vacancies to a rate 1.3 % below the statewide benchmark for the Missouri Hospital Association (MHA)
    - 16.7% decrease in turnover
  - For Licensed Professional Nurses
    - 40% decrease in turnover
  - For Behavioral Health Registered Nurses
    - 54.2% decrease in vacancies to a rate 9.1% below the MHA benchmark
    - A 25% decrease in turnover, exceeding the hospitals initial cost avoidance of $112,872

Impact on facility culture: These accomplishments were exceptional in transforming the hospital’s organizational culture and the safety of its environment for both patients and staff.

For more information about this project and team, please contact Dr. Felix Vincenz: felix.vincenz@dmh.mo.gov or (314) 877-5988
The St. Louis Psychiatric Rehabilitation Center (SLPRC) has been continually challenged with high vacancy rates, especially among Psychiatric Technicians (PTs), Professional Nurses (PNs), and Licensed Practical Nurses (LPNs). The center implemented a Peer Mentorship program for PTs, converted RN/LPN shifts from 8 hours to 12 hours, and utilized listening sessions to enhance communication.

OR

54.2% decrease in vacancies to a rate 9.1% below the MHA benchmark

The Center

Professional Nurses received education in robust process improvement, enabling them to reduce costs, errors, and inefficiencies. For Behavioral Health Registered Nurses, the center implemented an Assaulted Staff Action Program and utilized training adopted from the Racial Equity Learning Exchange. This led to a substantial reduction in turnover, with an 87.7% decrease for Behavioral Health Registered Nurses and 81.3% for Psychiatric Technicians (PTs), meeting the goal of reducing turnover by 20% for RNs alone.

Commitment to hiring in anticipation of increased call volumes contributed to the center's goal of reducing turnover among its nursing ranks, regardless of skill mix, with unacceptable turnover in Psychiatric Technicians (PTs), Professional Nurses, and Licensed Practical Nurses (LPNs) and RN vacancies, and reducing the annual turnover percentages of these classifications. For RN's alone, the goal was a 20% reduction in the turnover with a cost avoidance of $112,872.

The Challenge: The Taxpayer Assistance Call Center (CATA) was answering an average of 29% to 33% of calls during the peak tax season (February to April). Call overflows also impacted the percentage of calls answered by the Motor Vehicle and Driver License Bureaus.

The Goal: For CATA and the call centers in the Motor Vehicle and Driver License (MVDL) Bureaus to answer 100% of incoming calls, dramatically improving the customer experience for citizens and establishing a model as to how government can establish success measures, metrics, and accountability.

Work better by

Project implemented

- Department staff approached improving the CATA and MVDL answer rates from four directions.
  - Create analytical tools that would provide critical information on call center operations performance and use the information to improve performance
  - Motivate call center employees to increase their performance
  - Develop strategies to reduce the number of incoming calls to the call center
  - Increase the number of calls answered
- Data collection began regarding “why” callers were calling. The data was continually added into an Excel dashboard and was tracked over time.
- A Comparison Report was developed that tracks calls received, abandoned, or deflected, and the percentage of calls answered from one fiscal year to another.
- An Incoming Call Type Report was developed that compared the number and call types for any selected period. The collected data enabled the Department to identify trends by creating data points, rather than relying on anecdotal evidence.
- A Daily Interval Report was created showing call center performance intervals. An example of improvements made with this report was employee lunch schedules were restructured to ensure better call center coverage which led to fewer abandoned calls during lunch periods.
- The Online Individual Income Tax Return Tracker was revamped to clearly show where a return stood along the process and to allow customers to receive texts or e-mails to let them know when the return reached a new stage of processing.
- An Employee Dashboard Report was developed that
  - Enabled the department to collect performance information on individual agents
  - Enabled supervisors to share employee performance measures with agents during their Monthly Engage evaluations
  - Enabled the department to identify trends by creating data points, rather than relying on anecdotal evidence
- Call center improvements required commitment, dedication, and hard work by front line agents, their unit leaders, and their supervisors. Storyboards and other displays were introduced to show employees results and provide motivation.
- Strategies to reduce the number of incoming calls into call center included taxpayers being given the option of being informed via text or email when their return moved from one step to the next (over 53,000 took advantage of this option).
- Both process improvements and additional cash flow during the early portion of calendar year 2018, helped the Personal Tax Bureau reduce the number of days to issue refunds from 37.8 days in FY 2017 to 14.36 days in FY 2018 helping reduce refund inquiry calls.
- Enhancement of the Call Center Interactive Voice Response System.
- The Personal Tax Bureau reduced returns flagged for additional manual review, resulting in quicker processing times.
- Reduced handoffs by taking more information over the phone.
- In order to increase the number of calls answered when call volumes spiked, agency staff from other areas supplemented call centers.
- Peak season temporary employees were increased from 13 to 22.

Results:

- In FY 2017 -- 796,206 calls were received
- In FY 2018 -- 495,451 calls received (37% decrease)
- In FY 2017 -- an average of 29% to 33% of calls were fielded during peak season (February to April)
- In FY 2018 -- 81% to 89% of calls were fielded during peak season (February to April)

Impact on agency culture: While the initial focus of The Road to 100% was the Taxation Call Center, the Tax Division staff began sharing ideas across the department in weekly meetings. As the Road to 100% initiative ramped up, the Department’s Driver License Call Center followed suit -- and reached 100% multiple times for the first time in recent history.

**The Challenge:** The Missouri Department of Conservation (MDC) for decades produced educational resources widely embraced by educators and enjoyed by students across Missouri, but its educational products (magazines, posters, publications, CDs and books) were often utilized as supplemental materials by educators. As educational standards have become increasingly rigorous, the margin for supplemental or discretionary educational materials used by educators has narrowed. MDC was faced with transforming its approach to education from producing supplemental educational materials, “a la cart items”, into complete stand-alone curricular units that met strict state and national standards or risk losing its educational relevance.

The MDC Outreach and Education Division was tasked with addressing the challenge. The pivot in educational program development required a sea change in thinking, creation of a curriculum development unit, partnership with the Department of Elementary and Secondary Education (DESE), and systemic feedback from science teachers across the state which ultimately led to the decision to attempt to create fully developed curricular units.

**The Goal:** Develop an education program based on Missouri specific science curricula that met strict state and national standards for educational rigor and content that would be embraced by educators and ultimately students across Missouri.

**Project Implemented:** MDC developed the Discover Nature Schools (DNS) program for Pre-K through 12th grade. DNS is a Missouri specific science curricular approach/educational framework that meets Missouri learning standards, national science standards, and the needs of students regardless of educational level or ability that fit the needs of teachers across the state and simultaneously fulfill the mission of MDC. DNS components include:

- Provision of science education that fosters inquiry into nature-based education.
- Provision of financial assistance to schools for field trip reimbursement through non-competitive grants to engage students in the outdoors.
- Provision of field experiences that connect students with hands on, inquiry-based science instruction.
- Training to teachers via education consultants, who offer free grade level appropriate teacher workshops based on national and state science standards.
- Provision of curricular units that meet all diverse learners’ needs including those with disabilities and Individualized Education Plans (IEP’s).
- Provision of online Teacher Portal-discussion boards with equal access including remediation of publications to allow for Braille-to text reading and screen readers for the visually impaired.
- Provision of DNS workshops for Missouri teachers that provide curriculum for differentiated instructions strategies for nature-based education.
- Inclusive to all students including those with diverse educational and physical accommodation needs.

**Results:** Missouri has become the first state to create such a comprehensive nature-based education curriculum. The Department of Conservation’s Discover Nature Schools Program was created utilizing groundbreaking partnerships with DESE and national teacher’s organizations.

- Over half a million students have completed DNS units, of which the majority have re-enrolled for consecutive years.
- Approximately 90% of Missouri School Districts have used DNS curriculum.
- Showcased at National Science Teachers of America (NSTA) State and National conferences and in publications as inquiry–nature based educational model.
- DNS now serves as a model to numerous state conservation and natural resource agencies for educational curricular standard of excellence.

The Challenge: Two individuals were struck and killed by motorists while on duty flagging traffic in a period of less than six months. In response to these tragedies, a small but extraordinarily dedicated team of employees began developing a concept that evolved into the TMA Flagger.

Initially, the goal was to create a safer work environment for MoDOT employees, but the team evaluating the flagging process saw other opportunities. The team working on this project quickly realized they might be able to create an automated flagger that would not only save lives but also benefit MoDOT customers by making different elements of traffic and traffic control safer and more effective while making MoDOT more efficient.

Project Implemented: By rethinking the flagging process from the ground up, the MoDOT team began designing a completely automated flagger using equipment in a completely new and innovative way that drivers would instantly recognize. What evolved was an automated flagging device that:

- Completely removed MoDOT employee flaggers from the road’s surface;
- Used signage/equipment drivers often encountered including:
  - slow/stop paddles similar to signage on the sides of school buses,
  - flashing red and yellow signals similar to what drivers encountered at intersections with “lights”; and
  - a three-color variable message board that could display large electronic signage such as stop signs;
- Continued to work in harsh weather conditions when extreme heat or cold sometimes required human flaggers to postpone work or to move traffic along with frequent interruptions.

MoDOT combined all the equipment with an air horn and panic lights (used only when necessary) to signal motorists to either stop or move forward on a boat-style trailer pulled by a heavy-duty fleet vehicle.

Because MoDOT is a pioneer in the development of this type of vehicle, FHWA had to certify the TMA Flagger for road use before road testing could begin. Following numerous mandated modifications, FHWA permitted road testing but also required independent testing by a third party, which was conducted by the University of Missouri.

Results: Since November 2016, MoDOT has utilized TMA Flaggers on the roadways of Missouri. Successful utilization of the prototype TMA Flaggers has led MoDOT to recently issue a request for proposal for the purchase of 44 TMA Flaggers that will be deployed across the state. The TMA Flagger has drawn the attention of industry leaders, the Federal Highway Administration, and other state highway departments around the country.
While the TMA Flagger was initially designed to save the lives of MoDOT employees, it will also make MoDOT road work operations more efficient by facilitating the continuation of road projects when human flaggers would be removed from work zones due to extraordinarily hot or cold weather.

The creation of the TMA Flagger illustrates how a small team of MoDOT employees, motivated by a commitment to save the lives of their coworkers, invented a completely new device. They took responsibility for shepherding their creation through a complex federal certification process, prototype testing and, ultimately, adoption by the U.S. Department of Transportation for use on roads across Missouri.
